ICEBERG
CRYONICK ROLLER

Introduction

ABOUT THE PRODUCT

The Iceberg Cryonick Roller features an elegant, compact design with two ergonomic handpieces. One delivers alternating hot and cold therapy, while the other provides lymphatic drainage massage.

By combining thermal therapy and mechanical massage, the device supports natural body responses, improves skin tone, stimulates circulation, and promotes overall wellness. Short, comfortable sessions target the skin, subcutaneous tissues, and muscles for comprehensive body care.

Advanced Body Contouring

HOW IT WORKS

Lifestyle factors such as stress, poor diet, lack of exercise, and insufficient sleep can contribute to cellulite, uneven skin tone, localized fat deposits, and reduced skin elasticity.

The Iceberg Cryonick Roller combines thermal and mechanical stimulation in one compact, non-invasive device. Designed for beauty studios, wellness centers, and professional clinics, it offers an integrated approach to body contouring and skin care.

Its advanced technology focuses on three key benefits:

Skin toning

Improves skin firmness, enhances elasticity, and promotes a smoother, more youthful appearance.

Fat Reduction

Uses controlled cooling to target fat cells and support localized fat reduction.

Body Sculpting

Helps refine body contours, smooth uneven areas, and create a more sculpted silhouette.

Muscle Toning

Supports muscle recovery, improves muscle tone, and promotes a firmer, more defined appearance.

Dual-Therapy

THERMAL SHOCK & LYMPHATIC DRAINAGE

The Iceberg Cryonick Roller combines two treatments in one device. The thermal handle alternates between –22°C and +40°C to stimulate circulation and tissue response, while the second handle provides gentle lymphatic drainage massage. Both can be used independently or together.

A large touchscreen allows precise control of temperature, treatment settings, and session duration, making the device a versatile solution for professional skin and body care.

CRYONICK ROLLER

Lymphatic Drainage Handle

GENTLE MASSAGE FOR IMPROVED LYMPHATIC FLOW

The handle is a roller allowing for a gentle, yet effective lymph drainage massage. It helps prevent and get rid of lymph blockage, making it move faster and take away waste and toxins accumulated in the body. The health of the lymphatic system is important both for beauty and well-being.

A sound lymphatic system is a powerful boost for the immune system and detoxication processes of the body, and stands for sculpted curves and resilient skin. Cellulite reduction, adipose tissue removal, and body shaping are among the most desired and obvious effects of the roller handle.

CRYONICK ROLLER

Thermal Handle

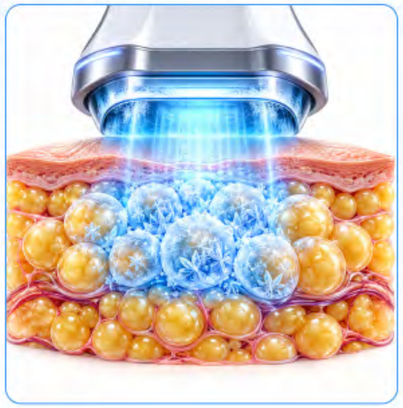

ADVANCED THERMAL & MECHANICAL THERAPY

The Iceberg Cryonick Roller combines hot and cold therapy with mechanical lymphatic drainage massage to support circulation, skin rejuvenation, and body contouring. This non-invasive approach stimulates the body's natural responses, helping improve skin appearance, reduce swelling, and promote overall well-being.

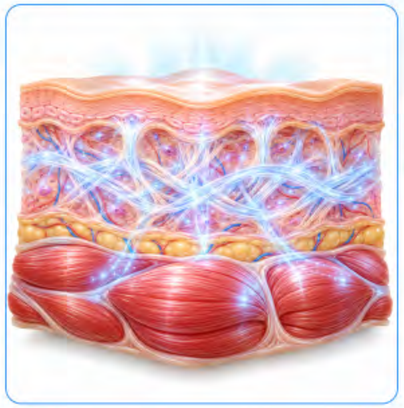

The combination of thermal and mechanical stimulation encourages blood and lymphatic fluid movement, supporting tissue recovery and natural regeneration. With regular treatments and a healthy lifestyle, the benefits may be maintained over time.

ICEBERG
CRYONICK ROLLER

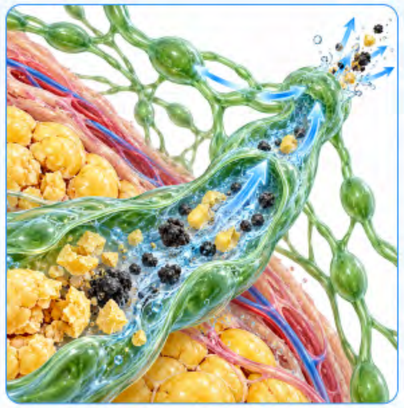

Smart Iceberg Cryonick Roller technology ensures that:

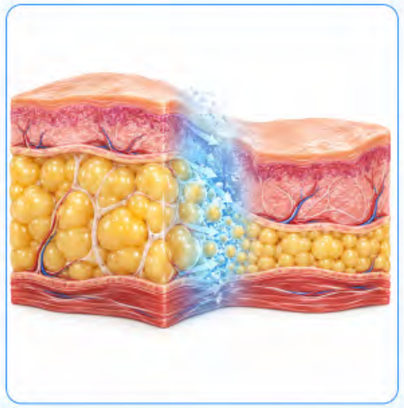

Fat tissue is targeted in the consequent cooling and crystallization processes.

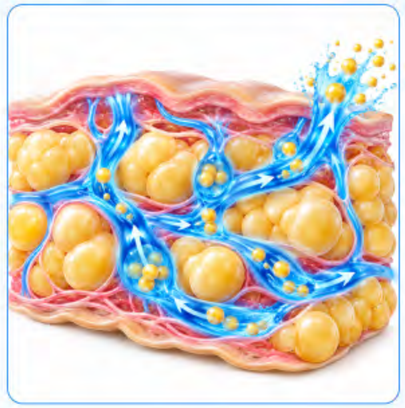

Skin quality is improved thanks to increased collagen stimulation and plumper muscle tissue.

Toxins, waste elements and destroyed fat cells are excreted from the body.

The residual fat layer is significantly reduced due to the condensation process.

Repeated accumulation of adipose tissue is eliminated due to the accelerated lymph flow.

Application

WHO RUNS ICEBERG CRYONICK ROLLER

Aesthetic and body-shape studios use it as the core cellulite and contouring service on their menu. Medical spa and beauty industry operators pair the thermal and lymphatic handles into a single premium appointment.

Wellness and longevity centers add it to a recovery floor alongside cryotherapy and red light, and physiotherapy or rehabilitation practices use the lymphatic handle specifically for post-surgical fluid management under supervision – a genuinely different clinical use case from the cosmetic contouring sessions, worth pricing and scheduling separately.

How Long Do Results Last?

Body Contouring

Visible improvements may appear after the first sessions. A healthy lifestyle helps maintain results, with follow-up treatments recommended every few months.

Facial Rejuvenation

Results can last for several months after a series of treatments. Thermal stimulation supports smoother skin and refined facial contours, while maintenance sessions help preserve results.

Cellulite Reduction

Improvements in cellulite and skin firmness may appear after each session but can be temporary. Regular exercise and a balanced diet help maintain results.
